EDUCATION

Kalinga Institute of Industrial Technology

October 2021 - September 2025

Bachelor of Technology in Computer Science and Engineering (CGPA: 9.44)

Bhubaneswar, Odisha

- **Relevant Coursework:** Data Structures and Algorithms, Operating Systems, Computer Networks, Database Management Systems, Computer Architecture, Cloud Computing, Software Engineering & Object-Oriented Programming

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL, PowerShell Script

Platforms: Linux/Unix, Windows, macOS, Docker, Kubernetes

Cloud, DevOps & Infrastructure: AWS (EC2, IAM, S3, CloudFormation, Lambda, CloudFront, ECR, Secrets Manager), Infrastructure as Code (IaC), Git, Bitbucket, Jenkins, Bamboo, Octopus Deploy, ArgoCD, Helm, CI/CD Pipelines

Monitoring & Analytics: Grafana, DevLake, Kibana

Areas of Expertise: DevOps, Cloud Computing, CI/CD, Kubernetes, Python Automation

EXPERIENCE

DevOps Engineer

September 2024 - Present

PineLabs

Bangalore, Karnataka

- Built and maintained CI/CD pipelines for 18+ microservices using Jenkins, Bitbucket, Docker, ArgoCD, Octopus Deploy, and AWS, enabling reliable application deployments across Dev, QA, UAT, Production, and DR environments.
- Developed Python automation scripts and AWS Lambda solutions to streamline Disaster Recovery operations, reducing DR drill execution effort by over 50% through automated CloudFormation stack updates, environment validation, and configuration comparisons.
- Implemented Kubernetes-based application deployments by building Docker images, publishing artifacts to AWS ECR, configuring ArgoCD applications, and developing Helm charts for resource provisioning, configuration externalization, and automated release management.
- Designed engineering observability and analytics solutions using Grafana, DevLake, SQL, and Python, including DORA Metrics, Open PR, Bitbucket Insights, and Engineering Overview dashboards that provided real-time visibility into software delivery performance and operational health.
- Developed internal DevOps tooling using Python and Bitbucket APIs to automate PR reporting, repository analytics, and engineering metrics collection, eliminating manual reporting and improving decision-making for engineering leadership.

Vocational Training

May 2023 – June 2023

Steel Authority of India

Asansol, West Bengal

- Acquired practical knowledge of large-scale system management, leading a team of 8 to develop detailed product reports.
- Coordinated go-to-market strategies, managed cross-functional teams, and ensured 100% on-time project delivery.
- Gained expertise in product marketing, market research, messaging development, and go-to-market strategy.

PROJECTS

DORA Metrics Dashboards | *Grafana, SQL, DevLake, Python, Jenkins*

- **DORA Metrics Analysis Platform:** Developed interactive Grafana dashboards powered by DevLake and SQL to visualize DORA metrics, pull request workflows, and engineering performance indicators across multiple repositories.
- **Automated Open PR Tracking:** Designed a custom Open PR dashboard by extracting pull request data from Bitbucket, automating data ingestion through Jenkins pipelines, and storing records in a custom SQL database created and maintained using Python scripts for real-time reporting and analysis.
- **Process Optimization Insights:** Enabled engineering teams and managers to identify bottlenecks in code review, approval, and deployment processes through actionable metrics, improving visibility into software delivery performance.

ACHIEVEMENTS

- **JP Morgan CFG Hackathon:** Selected from over 50,000 applicants to participate in the prestigious JP Morgan Code for Good (CFG) Hackathon, collaborating on solutions for Indigenous and Frontier Technology Research Centre (IFTR).
- **CodePlay by PineLabs:** Developed an automated system to validate DevOps deployment and disaster recovery checklists, improving operational reliability and reducing manual effort; awarded **3rd place** in the company hackathon.
- **AWS Summit Bengaluru 2026:** Participated in technical sessions and workshops on Agentic AI, exploring autonomous AI agents, generative AI applications, and emerging cloud-native AI solutions on AWS.
